BLOOD PRESSURE MONITOR

ARM TYPE	P07
WRIST TYPE	P11
ACCESSORIES	P11

Description

AVG3 M Average value for the last 3 measurements

USB Type-C

Irregular heart beat indicator

Bluetooth
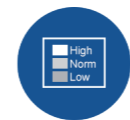

WHO blood pressure classification indicator

Automatic off

2×99 sets of memory

Battery level indicator

Wrist blood pressure monitor

Date and time indicator

Large display

Voice option

How to measure

No smoking, Coffee, food or Exercise before the measurement

Quiet environment

Appropriate temperature

Rest 3-5 minutes

Avoid talking during measurements

WRIST TYPE

1

Roll or push up your sleeve to expose the skin. Apply the cuff to your wrist with your palm facing up.

Position the edge of the cuff about 1 to 2cm from wrist joints.

Fasten the wrist cuff around your wrist,leaving no extra room between the cuff and your skin.

1-2cm
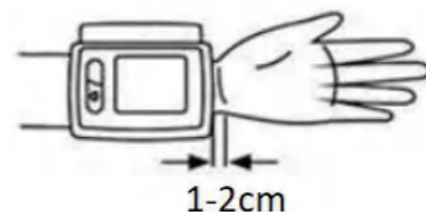

2

Sit comfortably with your tested wrist resting on a flat surface. Place your elbow on a table so that the cuff is at the same level as your heart. Tum your palm upwards and sit upright in a chair.

The cuff worn on your wrist should be placed at the same level as your right atrium of the heart.

Padded

The ideal altitude difference between table and chair is 25-30cm.

ARM TYPE

1
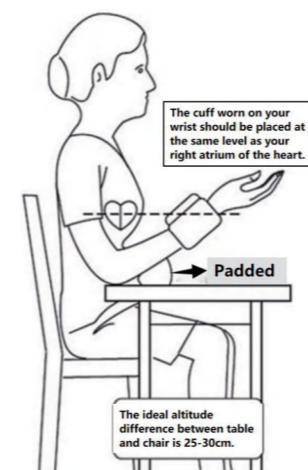

Roll or push up your sleeve to expose the skin. Make sure your sleeve is not too tight. Hold your arm with your palm facing up and tie the cuff on your upper arm, align the Artery indicator with the main Artery (on the inside of your arm).

INDICATOR WITH ARTERY
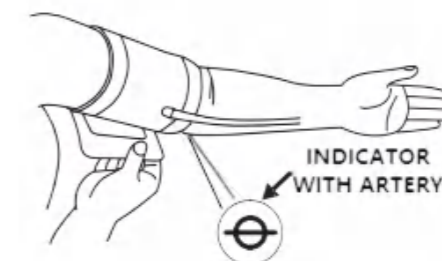

2

Make sure the bottom edge of the arm cuff 2 to 3 cm above the inside elbow. Then wrap the cuff securely.

2~3cm
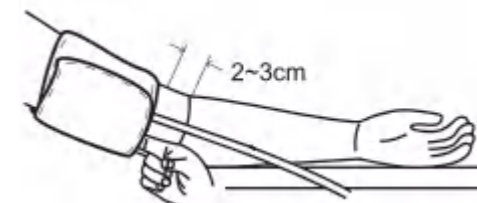

3

Sit upright in a comfortable chair with your back against the backrest of the chair. Keep your feet flat and your legs uncrossed.

Place your arm resting comfortably on a flat table. The cuff worn on your arm should be placed at the same level as your right atrium of the heart.

Take off the thick clothes like sweater to measure

The cuff worn on your arm should be placed at the same level as your right atrium of the heart.

The ideal altitude difference between table and chair is 25-30 cm.

POCKET ECG MACHINE

ECG TYPE **P18**

BPM+ECG TYPE **P18**

Description

- 4.46″ Touch screen
- 250g Light weight
- Bluetooth
- Glasgow algorithm
- Hd Camera
- Automatically off
- Wi-Fi Transmission
- >24H working time
- Blood pressure
- Micro USB port
- ECG
- Battery level indicator

Data transfer functions

| Home | Clinic | Ambulance | Primary health care |

The ECG report can be sent to the remote via email, which is very convenient and fast.

Email >>>> ECG report
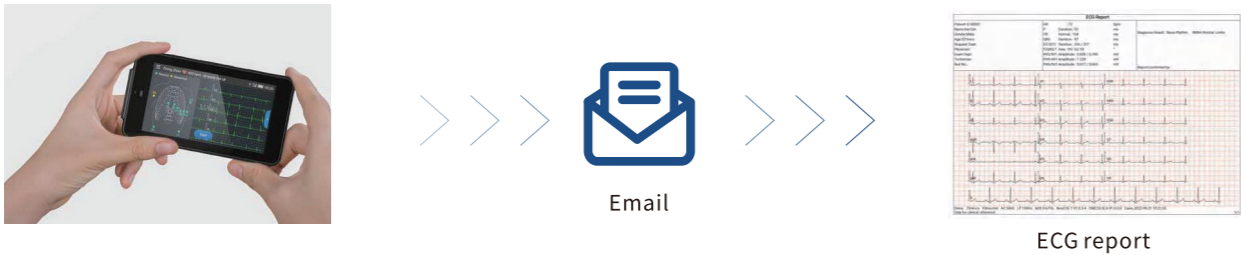

Support multiple data transmission methods over a Wi-Fi network and printing ECG Reports via an external printer.

MESH NEBULIZER	P23
DC COMPRESSOR NEBULIZER	P26
AC COMPRESSOR NEBULIZER	P27
ACCESSORIES	P30

Description

Battery or USB	Light&Portable
Quiet	Speed is adjustable
One key use	Small particles
Rechargeable	USB Type-C
Little liquid residue	Handsfree
Family use	Medical level
Portable	Low noise

How to clean

1

Open medical cover. pour the residual medical liquid in the medical bottle.

2

Remove mouthpiece from nebulizer.
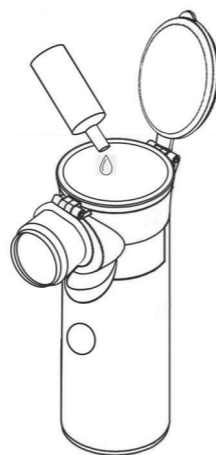

3

Put available hot pure water in medical bottle (Water temperature:30℃-60℃), and push [START/STOP] button for 5 seconds to cleaning mode and spraving 1-2 minutes to clean.

4

One hand to hold the main unit, and push behind of main unit [PUSH] button, the other hand hold two sides of medical bottle, pull follow slot parallel, remove medical bottle.
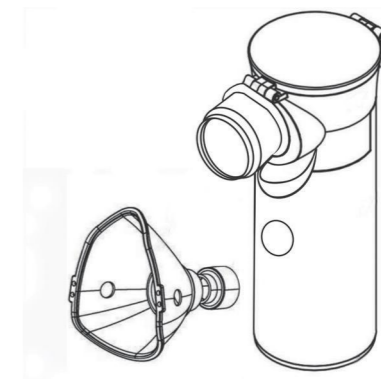

5

Clean inside and outside surface of medical bottle, mouthpiece and nozzle by pure water, after cleaning, dry moisture of mesh by medical gauze slightly, and disinfected with 75% alcohol.

Description

Suitable for hospital and family

Cuff not easy to fall off

Easy-to-read

Inflation bulb Easy to use

High accuracy

Storage bag

Pediatric

Aneroid sphygmomanometer with stethoscope

ABS plastic case

Easy to carry

Palm model

One-handed Use

Large dial

HOW TO OPERATE

1
Place the stethoscope at the intersection of the blood vessels

2
Place the stethoscope at the intersection of the blood vessels

3
Make the armband point at the intersection Of the blood vessels

4
Air pressure in the balloon squeezing blood vessels

5
Observe the instructions of the sphygmomanometer

6
Slowly deflate, pay attention to the sound of pulse

7
When the first pulse sound is heard, it is considered to be high pressure and contraction.

If you continue to deflate, you can hear a strong pulse sound through the stethoscope, and gradually lighten it until you hear a smoother than normal pulse sound.

At this time, the blood vessel is considered to be completely uncompressed, and it is regarded as lowpressure.
